

The DEPAC type 186 is a dynamic, balanced single-component seal that was specially developed for installation spaces according to DIN 24960 / EN12756. Scoring of the shaft is ruled out despite the dynamic design, because the dynamic O-ring seals against the seal face and not against the shaft. The balancing results in lower face friction and thus less wear, which is reflected by an optimisation of the service life.

DEPAC also offers these mechanical seals in larger dimensions than the standard sizes indicated in the standard. The mechanical seal can be combined with popular stationary parts, retainers, glands and adapter parts.

Advantages

- L1Ku installation length with stationary parts DS1 and DS2
- No scoring of the shaft or shaft sleeve
- Fits installation spaces according to DIN 24960 / EN12756
- Balanced
- Independent of the direction of rotation
- Multiple springs made of Hastelloy C
- Springs outside the medium - no blockage of the springs

Mechanical seal

Type 186

Technical specifications

Area of application*

Pressure:	700 mm Hg to 30 bar
Temperature:	dependent on elastomer
Sliding speed:	up to 30 m/s
Shaft movements:	axial $\leq \varnothing 35 \pm 0.5 \text{ mm} \geq \varnothing 38 \pm 1.0 \text{ mm}$ radial $\leq \varnothing 35 \pm 0.5 \text{ mm} \geq \varnothing 38 \pm 0.5 \text{ mm}$

* The maximum specifications for temperature, pressure and sliding speed apply in each case to independent higher operating conditions.
However, this does not mean that the seal will function with all extreme conditions at the same time.
If in doubt contact DEPAC.

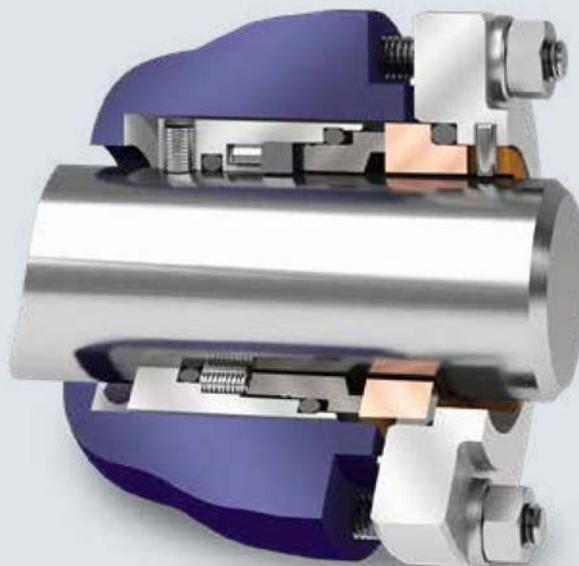

Dimensions

Shaft diameter:	16 – 160 mm 5/8“ – 6 1/4“ Special sizes on enquiry
