

DEPAC stationary parts – extremely versatile!

A component mechanical seal consists of the individual parts of the rotary unit, the stationary part and the stationary retainer, also known as the "gland". In the spare parts market, the units in use at the end consumers have the most diverse retainers and dimensions. In order to cater for this situation and to offer the operator an alternative to his existing parts, DEPAC offers a large selection of different stationary parts. The selection of the ideal mechanical seal must accordingly be accompanied by the selection of the correct stationary part. The alternative to this, however, is the selection of the ideal stationary part with the possible use of a new gland or an adapter part, which can be seen in the separate data sheet "Glands and adapter parts".

Notes

To check the specified installation lengths, e.g. L1KU from DIN 24960 / EN12756, the length dimensions of the selected mechanical seal should be added to the length dimensions of the stationary part. The stationary parts are supplied with O-rings or V-rings. Standard materials for O-rings and V-rings are EPDM or FKM. Other dimensions and materials are available on request or enquiry.

Stationary parts

Technical specifications

Dimensions

Shaft diameter: 10 – 160 mm*

3/8“ – 4“ **

Special sizes on enquiry

* DIN 24960 / EN12756 only up to a shaft diameter of 100 mm

** For mechanical seals with imperial dimensions, the corresponding metric stationary parts according to the dimension table can be used.
